

B1
B2

a liquid crystal display module having a first frame and a second frame, wherein the first frame further includes horizontal and vertical flange portions such that the horizontal flange portion is substantially perpendicular to the vertical flange portion and the horizontal flange portion is parallel to a surface of the second frame and in contact with a portion of the second frame;

a rear monitor case for encasing the liquid crystal display module such that rear monitor case covers the second frame; and

a bracket having a vertical coupling portion and a horizontal coupling portion, wherein a first end of the vertical coupling portion is perpendicular to the horizontal coupling portion, wherein the vertical coupling portion of the bracket is disposed at an inner surface of the vertical flange of the first frame and the horizontal coupling portion of the bracket is disposed at a surface of the second frame, wherein the vertical coupling portion couples the first frame and the rear monitor case, and wherein the horizontal coupling portion couples the second frame to the first frame and the rear monitor case, and the bracket is mounted internal to the first and second frames.

B2

6. (Twice Amended) A mounting bracket for assembling an LCD module having rear and front frames and a LCD panel mounted between the rear and front frames, wherein the mounting bracket comprises:

a vertical portion;

Amended
a first horizontal portion, wherein the first horizontal portion is substantially perpendicular to a first end of the vertical portion; and

a second horizontal portion for supporting the front frame, the second horizontal portion being substantially perpendicular to a second end of the vertical portion, wherein the bracket is mounted internal to the front and rear frames.

12. (Amended) An LCD monitor for a computer, comprising:
an LCD module including:

Amended
(a) an LCD panel;
(b) a back light unit providing light to the LCD panel;
(c) a rear main frame for supporting the LCD panel and the back light unit; and

(d) a front frame coupled to the rear main frame with the LCD panel and the back light unit disposed therebetween, the front frame having a flange portion corresponding to sides of the LCD panel and the back light unit;

a bracket having a first coupling portion for coupling to the flange of the front frame and a second coupling portion for coupling to the rear main frame, the bracket being internal to the front frame and the rear main frame; and

B3
Amended

a monitor case for encasing the LCD module, the monitor case being coupled to the first coupling portion of the bracket.

16. (Amended) A liquid crystal display for a computer comprising:

B4

a liquid crystal display module having an LCD panel, a front frame and a rear frame, wherein the front frame and the rear frame are attached to each other with the LCD panel disposed therebetween;

a bracket having a first coupling portion including a first coupling unit and a second coupling portion including a second coupling unit, the bracket being internal to the front and rear frames;

a monitor case for encasing the liquid display module; wherein the monitor case is coupled to the first coupling portion of the bracket through the first coupling unit, the front frame of the liquid crystal module being coupled to the first coupling portion through the first coupling unit, and the liquid crystal display module is coupled to the bracket via the second coupling unit such that rear monitor case covers the second frame.

Attached hereto is a marked-up version of the changes made to the application by this Amendment.
